Q5

No

Do you support the proposed Supplementary risk management principles for oral health during the COVID-19 pandemic? If you do not support the draft, please share your concerns, reasons for your view, and proposed alternatives if you have any.

Q6

Please share any comments you have below:

In principle, I support the draft but I do have concerns about the public accessing PCR testing. My partner works in the local hospital lab and she is processing the Covid tests daily. They are already struggling with dealing with the daily testing when we do not have an evolving outbreak here. It will be difficult to manage elective PCR testing when there are more cases here.

Is it possible to consider the Rapid Antigen testing so that we can test people on the day of their appointments? This may be more cost effective for the MoH and easier for patient and practice management.

Is it really feasible to ask us to all change our scrubs/tunics etc after every patient? The aprons are a good idea but practically, they do not cover enough area to be effective? Is there another way of looking at this?
