

## Scopes of practice for orthodontic auxiliary practice

Orthodontic auxiliary practice is a subset of dental hygiene practice that involves implementing orthodontic treatment plans prepared by a dentist or orthodontist, by performing orthodontic procedures and providing oral health education and advice on the care and maintenance of orthodontic appliances in accordance with ~~this scope of practice and~~ an orthodontic auxiliary's approved education, training, experience and competence.

Orthodontic auxiliaries practise under the direction of the dentist or orthodontist who is responsible for the patient's clinical care outcomes and who is on-site at the time ~~care is provided~~.

The scope of practice encompasses the orthodontic auxiliary competencies.

~~Orthodontic auxiliary practice includes:~~

- ~~• taking clinical photographs for records~~
- ~~• taking impressions. Obtaining a record of occlusal relationships~~
- ~~• tracing cephalometric radiographs~~
- ~~• placing separators~~
- ~~• sizing of metal bands and their cementation including loose bands during treatment~~
- ~~• supragingival polishing of teeth (as part of oral hygiene, before bonding and after removal of fixed attachments)~~
- ~~• preparation of teeth for the bonding of fixed attachments and fixed retainers~~
- ~~• indirect bonding of brackets as set up by the orthodontist~~
- ~~• providing oral hygiene instruction and advice on the care and maintenance of orthodontic appliances~~
- ~~• placing archwires as formed by the orthodontist when necessary and replacing ligatures /closing self ligating brackets~~
- ~~• removing archwires after removing elastomeric or wire ligatures, or opening self ligating brackets~~
- ~~• removing fixed orthodontic attachments and retainers~~
- ~~• removing adhesives after the removal of fixed attachments using burs in slow speed handpieces where there is minimal potential for the removal of enamel~~
- ~~• trial fitting of removable appliances — this does not include activation~~
- ~~• fitting of passive removable retainers~~
- ~~• bonding preformed fixed retainers~~
- ~~• making study models, and fabricating retainers, and undertaking other simple laboratory procedures of an orthodontic nature~~
- ~~• taking intra-oral and extra-oral radiographs.~~

Practice in this context goes wider than clinical orthodontic auxiliary practice to include teaching, research, and management, given that such roles influence clinical practice and public safety. Areas of orthodontic auxiliary practice which were not included in a practitioner's training should not be undertaken unless the practitioner has completed appropriate training and practises to the standards required by the Standards Framework for Oral Health Practitioners.
